

invisible table & invisible side Tokujin Yoshioka

Invisible Table is square-topped table the size and weight almost 20 kg of which mark a new and significant pioneering advance in the company's technological innovation but also in that of the industrial design world in general. Invisible Table surprises, both for its aesthetics and for the extreme technology that has created it. This table is, in fact, produced by Kartell through the injection technique using a single mold that can handle the almost "off the scales" weight and the size and that guarantees its stability. Invisible Side is a piece of clean, linear, minimal design, the aesthetic synthesis of the designer's Japanese culture. A light and elegant multi-functional product which can be easily transformed into a side table or a console and is at home not only in the various home environments (from living room to bedroom) but can satisfy the various functional requirements of contract as well. Invisible Side today comes in two heights, two transparent versions (crystal and smoke) and two matte versions (white and black).

Invisible Table

5070/5075			width	height	depth
