

romeo & juliet koen baeyens, stijn goethals, & basile graux

Romeo & Juliet offers passers-by a comfortable place to sit and relax. If several benches are put in line, the distance between the trees is identical, creating architectural harmony. Their name 'romeo & juliet' refers to the two trees. Just as Romeo and Juliet could not be with each other nor live without each other, the trees are destined to be together without being able to touch each other.
