

Sag nendo/oki sato

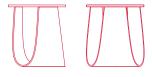

description:

Either stool or table, outdoor or indoor: Sag represents a polyhedral and functional complement. Stool's legs are usually designed with "column" elements. On the contrary, Sag has been designed as a whole piece folded on itself, as a fabric suspended in the air and melted in three directions into a single shape. Its concave arc structure, thus generated, gives Sag its special soft and elastic image, but also an incredible sturdiness, capable of distributing forces and absorb loads.

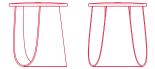

materials:

Struscture in stiff polyurethane, obtained through moulding, available in goffered matt white and matt mud. The polyurethane used, called TECH, is a structural and high-density material, which means it is highly shock-resistant, as well as scratch-resistant and resistant to ageing. Seat available in polyurethane and bamboo. The polyurethane version, in matt white or matt mud, is moulded in a soft integral polyurethane called Freeform (with plywood insert). The wood variant is composed of a bamboo veneered plywood panel, with narrow plank and evaporated finish.

dimensions:m

bamboo version Ø40 H43 cm (Ø15-3/4" H17")

indoor/outdoor polyurethane version Ø40 H44 cm (Ø15-3/4" H17-3/8")
