

Togrul

Designer: Gordon Guillaumier

Year: 2021

A totem that transforms any room into a temple of conviviality. With Togrul, designer Gordon Guillaumier goes beyond the limits of matter to create a table suitable for homes and contract spaces alike. Available in different sizes, the bases in rigid polyurethane are finished in clay, made from 100% raw earth and applied by hand by master craftsmen. The marble top is available in a round version with different finishes. Togrul's sculptural base is the perfect synthesis of energy and solidity.

Materials informations

Wood

Wood is a renewable raw material. All products derived from wood, such as for example plywood, have the advantage of being able to be machined more easily than wood and do not deform. The timber we use – solid or plywood – comes mainly from European and Russian forests and is seasoned to specific values of humidity with tests. Moot of the structures of the products in the collection have a frame in solid pine or ash, or in beech or poplar plywood.

Metal

The need to combine complex yet lightweight shapes with resistant materials necessarily involves the use of metals ouch as steel and aluminium. products in polyurethane foam are made with an inner steel frame for adding strength to the structure. The bases are in tubular metal which can be chromed with a gloss or satin finish or painted with epoxy powders.

Marble 41% Rigid polyurethane 32% Iron 24% Mdf 3%

Recyclability

All Kelly T elements are 100% recyclable when fully separated. Tacchini undertakes on-going research and development, with efforts made to introduce products which are a perfect combination of function and safety without jeopardizing the final design of the same articles. During production attempts are made to minimize noise and emission levels and to reduce rejects as far as possible. All the single materials which make up the production process, once disassembled, can be reused several times, maintaining a high quality standard.

Packaging

Kelly T element is dispatched already assembled. It is protected by tissue paper and cellophane to protect the covering from dust and direct contact with the cardboard. The product is packed in rigid cardboard boxes suitable for world export. Manufacture of the packaging observes the criteria for recovery both as recycling and energy recovery and composting.

Once a product reaches the end of its life cycle it has to be eliminated.
