

link hee welling

LINK was born out of the desire to create a chair with gentle curved comfort but without the need to use the 3D wood bending technique. Its welcoming seat is defined by a gap in the back which contributes to a visual lightness and ventilation. It is constructed of a single sheet of plywood; with a link between the two wings being a technical device, but also useful to insert a number for rows of chairs in meeting and congress rooms. LINK are available with or without arms, frame of either 4 legs, four star base or castors on five star base both with swivel or sled base.

materials:

LINK is available in blanched oak, black open pore wood or white lacquered. Seat cushion available in fabric or leather. Bases in matt chrome, black or white. Swivel bases in sanblasted aluminum, black or white.
