

four ferruccio laviani

Four is a functional and refined table with a sharp geometric design. Thanks to an elegant design solution, the thin top appears to float above the leg base. This allows for easy positioning of drawers and container elements, when using a group of tables as a work island in an office. Four is available in two versions: the first, more informal version includes a 1" stratified laminate top above a painted steel structure; the second is a sophisticated table with a satin-finish aluminum top and is an excellent solution for meeting rooms, managerial offices or dining rooms.
