

tiramisu andries van onck

Tiramisu is a functional 3-step folding stepladder with slip-resistant finish. It features a light supporting structural design: the curved bars offer support on the ground and the handle constitutes not only a robust support feature during use, but also a practical functional tool after use. The lightness of the material, the practicality of the closing mechanism, the versatile colors and the formal elegance allow Tiramisu to be used with total freedom in any furnishing context. The stepladder can support a maximum of 570lbs and can be wall-mounted
