

## officina ronan & erwan bouroullec

Forging, the process used to shape iron, pressing it between the hammer and anvil, has a history that stretches back over millennia. Throughout the ages, this technique has been used to create an infinite number of everyday objects and decorative artefacts. The Officina collection of tables explores the possibility of establishing a new creative language while working with an ancient fabrication process such as iron forging. After the tables launched at the last Salone del Mobile, this year the collection expands to include a chair and stools that echo the forged iron structure of the tables, combined with shells in a range of different materials. Once again, absolute simplicity combines with the allure of a raw material handed down through the centuries, alive, with those slight imperfections that make each piece in this collection unique, with an unmistakably industrial feel, but combined with a profoundly refined and elegant spirit.

### Materials

Frame in wrought iron, galvanized or cathodically treated and painted in polyester powder. Seat in standard injection-moulded polypropylene with glass fibre added or in polypropylene covered in premium-grade leather. Tops in steel plate electro-galvanized and painted in polyester powder, in American walnut, in thermo-treated ash. Available in the following finishes:
