

plana lucidipevere

For the first time, Kristalia uses injection-moulding technology, with polypropylene reinforced with glass. This system offers an attractive, resistant and versatile chair, which can be stacked in a pile of up to ten chairs. With its materials and its sturdiness, it is ideal for all places: in the home, for contract furnishings and also in outdoor areas. Plana is also available in four colours that match all furnishing and life styles: white, black, beige and fluo green.

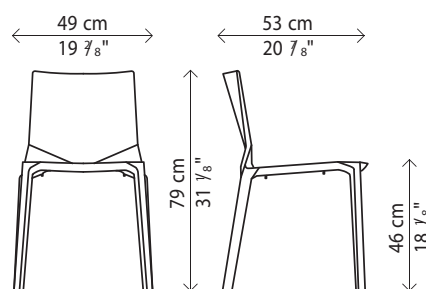

A slightly padded version of the plana, upholstery in synthetic leather or Scuba.
