

## m1 chair piergiorgio cazzaniga

A stackable chair whose shell, with partially recycled and mass-pigmented plastic material (linear polypropylene), is made by a process of co-injection moulding in the colour options white, red or lacquered matt black.

### materials:

Finish options available for the base:

- satin-finished 304 stainless steel
- chrome-plated
- polyester powder lacquered steel with a matt white finish.

The shells in the various colours can be freely matched with the bases.

Fully recyclable.

The standard version can come with an upholstery kit (in fabric or leather plus padding) which makes the shell fully padded. Polyurethane filling. The upholstery kit can be purchased separately and is easy to remove, thus leaving the chair in the standard version.
