

# mobius Lucidi Pevere

Surfaces usually have two sides, but one day a mathematician discovered that it was possible to make a surface with just one side. The geometric shape called "Mobius band" inspired this occasional table in bent sheet metal with black or white lacquer finish. It can be used with or without a glass top. Algebra and design provide an original combination.

finish of frame:

steel painted white or steel painted black

finish of top:

transparent extra light glass transparent smoked glass

dimensions:
